**Abstract**

Establish an information stream that is divided between production areas, wholesalers, and retailers, and forecast the supply and demand of agricultural products. The goal is to improve the profitability of each player and solve the social issues in Japan that are facing the food crisis by realizing agricultural product transactions that match the time, place, and quantity required.

**Features**

- Streamlining agricultural product distribution through transactions using forecast information

**Application Scenarios**

- agricultural product distribution

**Roadmaps**

- We will conduct a demonstration experiment to examine its effectiveness and business feasibility. After using it for domestic agricultural product distribution, we will consider using it for export transactions in the future.

**Collaboration Partners**

- SHINMEI Holdings Co., LTD., Toka Osaka Co., Ltd.

**Exhibitors**

- NIPPON TELEGRAPH AND TELEPHONE CORPORATION,
  NTT Business Solutions Corporation,
  NTT AgriTechnology Corporation
