

# We enhance the quality of "connection" by fusing the real and cyber

## Background

Human activities are expanding from the real world, to online spaces such as SNS, and even to cyberspace represented by Metaverse. We aim to create new technologies from space and human, that form the basis of a world fusing real and cyber.

## Summary

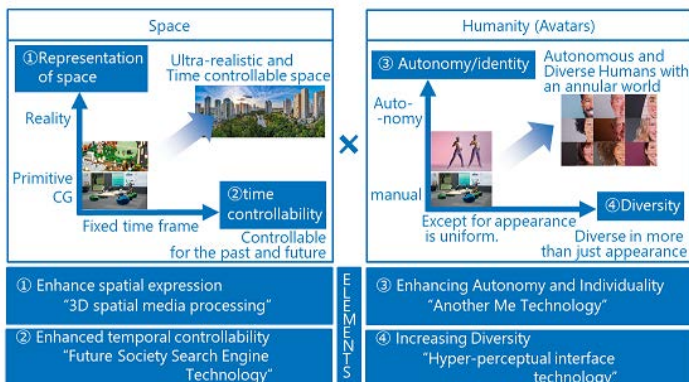

- (1) 3D spatial media processing technology creates a highly immersive and photorealistic cyber space.
- (2) "Another Me" that is a avatar actives in the cyberspace autonomously will enable future communication.

## Feature 1

3D point cloud media processing technology that reproduces even the mood of the space by integrating a huge amount of data measuring the real world

## Feature 2

"Another Me" technology that allows avatars with individuality to act autonomously in cyberspace and share the experience to the original person

## Future benefits

New Metaverse without distance, time, and physical limitations and affects reality will create the value with new communities and connections, and realize prosperous society with diversity.
