

Providing audiovisual-haptic experience

Abstract

- Comptics = Computer + Haptics
- You can create a haptic content to the music you listen to, videos you watch, and games you play, which enriches the experience.
- Comptics allows you to edit haptic experiences on consumer music/video edit tools by embedding haptics as a specific sound in the content.

Features

- Use existing communication protocol and media format such as Bluetooth and MP3
- Sharing haptic contents on the digital platforms

Application Scenarios

- Concert/Special event
- SNS
