

Visualize the real time traffic of virtual network

Abstract

By providing network traffic visualization in real-time along with the Hardware accelerator (HWA) designed for virtual network monitoring, our solution delivers analysis of virtualized network and acquisition of virtualized network and acquisition of virtualized network and acquisition of virtualized network data that has been selected as necessary.

Features

- Real-time monitoring of 10G network along with our HWA
- Provides flexible monitoring by combining multiple fields
- Easy operation for HW/SW cooperative system

Application Scenarios

- Infrastructure monitoring for high quality, high capacity services
- Internal network analysis and monitoring
- Analyzing user traffic such as edge, cloud, 5G and IoT

Roadmaps

Currently commercialized by NTT-AT. Plan to expand supported protocol to meet customer requirements. Plan to monitor of 100Gbps network in real time.

Exhibitors

NIPPON TELEGRAPH AND TELEPHONE CORPORATION, NTT Advanced Technology Corporation
