Combining knowledge and AI agent collaboration for business strategy

## Technical Challenges & Goals

Current technologies struggle to integrate and reason across diverse business knowledge. We aim to automatically generate actionable business strategies through structured business knowledge and multi-domain reasoning.

## Key Technologies

### Core Technologies

- Constructing a knowledge graph from business documents through multi-agent deliberation
- Combining business knowledge graphs and agent expertise for multi-perspective reasoning

### Key Differentiators

- Multi-agent knowledge graph construction balancing fine-grained analysis with broad exploration
- Multi-agent reasoning for deeper understanding and application of complex business knowledge

## Use Cases

**Sales & Marketing**

By semantically structuring business knowledge from daily sales reports and meeting records and enabling its integrated use, we achieve effective automated business strategy planning.
